With the rapid takeoff of China's automobile industry, the mobile refrigeration sector in the country is witnessing a strong development trend. Every aspect—from production and sales to after-sales service—has become increasingly mature. At the same time, the government continues to raise requirements for low-carbon and environmentally friendly products in the industry, accelerating product innovation and industrial upgrading among enterprises. The enormous market potential is beyond doubt.

Since its inception, the **2026 Gehua Shanghai International Automotive Air Conditioning and Thermal Management Technology Exhibition** has reached its 24th year. The exhibition closely follows the development trends of the mobile refrigeration industry and continuously innovates. Its influence extends not only across the nation but also throughout Asia and even globally, making it one of the most important professional exhibitions in the mobile refrigeration industry.

As a globally renowned professional exhibition for mobile refrigeration, the event will focus on automotive air conditioning, refrigeration components, automotive thermal management, mobile energy storage, and related sectors. This year's exhibition will showcase not only traditional automotive air conditioning products but also highlight exhibits such as commercial vehicle air conditioning systems and components, automotive thermal management systems and components, parking air conditioning, and lithium battery energy storage solutions. By creating an efficient trade platform for mobile refrigeration, the exhibition also meets the needs of enterprises to explore markets and achieve integrated development.
